Science and Technology Non-Personnel Resource Request Update

- In the past, the Science and Technology Division has submitted non-personnel resource requests.
- It became apparent that the requests were primarily for equipment that needed to be replaced due to normal wear and tear or general consumables that are used in science labs.
- In response, I worked with the VPAS to amend our ongoing budget to meet these recurring needs.
- The Science and Technology non-personnel requests are now comprised of items that cannot be covered by the amended budget.
- This year, Science and Technology had only one request, which by definition did not need to be prioritized.
